Special Considerations for Medicare Prescriptions.

You have the right to request a coverage determination from your Medicare drug plan if you disagree with information provided by the pharmacy. You also have the right to request a special type of coverage determination called an “exception” if you believe:

- You need a drug that is not on your drug plan’s formulary list of covered drugs;
- A coverage rule (such as prior authorization or a quantity limit) should not apply to you for medical reasons; or
- You need to take a non-preferred drug and you want the plan to cover the drug at the preferred drug price.

What you need to do to file a Medicare coverage determination.

You or your prescriber should contact your Medicare drug plan to ask for a coverage determination by calling the plan’s toll-free phone number on the back of your plan membership card, or by going to your plan’s website. You or your prescriber may request an expedited (24 hour) decision if your health could be seriously harmed by waiting up to 72 hours for a decision. Be ready to tell your Medicare drug plan the following information:

1. The name of the prescription drug that was not filled. Include the dose and strength, if known.
2. The name of the pharmacy that attempted to fill your prescription.
3. The date you attempted to fill your prescription.
4. If you ask for an exception, your prescriber needs to provide your drug plan with a statement explaining why you need the off-formulary or non-preferred drug, or why a coverage rule should not apply to you.

Five Things You Can Do to Prevent Infection

It is important to try and avoid contagious disease, such as the common cold and the flu. Here are five easy tips to help prevent the spread of infection.

1

Clean your hands

Clean your hand thoroughly for at least 15 seconds. Use soap and warm water (be careful of the water temperature and use a temperature that is comfortable to you). Clean your hands: after visiting a place of business, before handling or eating food, after using the restroom, after visiting someone who is ill, after playing with a pet, after changing a diaper, etc.

2

Cover your mouth and nose

Germs can travel 3 feet or more when you sneeze or cough. Always cover your mouth to prevent the spread of infection. You can sneeze or cough into a tissue or at the bend of your elbow. Always make sure you clean your hands right away.

3

Avoid close contact with others if you are sick

If you are sick, stay away from others (if possible) and do not touch or shake hands with people. If you are visiting the doctor for treatment, call ahead and ask if there is anything you can do to avoid spreading the infection.

4

Get your vaccinations

Vaccinations are available for: Chicken pox, measles, tetanus, Shingles, Mumps, Meningitis, Hepatitis, Pneumonia, Flu (Influenza).

5

Ask healthcare professionals to wash their hands and wear gloves

Healthcare providers come in contact with lots of bacteria and viruses. Do not be afraid to ask them if they should wear gloves before they treat you.
